

**EXAM:** MRI HEAD WITHOUT CONTRAST

**INDICATION:** Headache

**COMPARISON:** None

**TECHNIQUE:** Multiplanar, multisequence MR imaging of the head obtained.

IV Contrast: None

**FINDINGS:**

**Midline Structures:** The sella turcica and pituitary gland are normal. Craniovertebral alignment and cerebellar tonsils are normal.

**Ventricles:** Normal size and configuration for patient age.

**Intracranial Hemorrhage:** None.

**Brain Parenchyma:** Brain parenchyma is normal in signal. There is no diffusion restriction.

**Intracranial Vasculature:** Major intracranial vessels are grossly patent.

**Orbits:** Normal.

**Bone Marrow:** Bone marrow signal within normal limits.

**Visualized Upper Cervical Spine:** Normal.

**Paranasal Sinuses and Mastoid Bones:** No acute sinusitis or mastoiditis.

**IMPRESSION:**

Normal MRI of the head.
